

High quality chest press MWH-001

Series Description:

1. Innovative appearance and color, split structure design, BDL modeling, color customization;

2. stable and reliable structure, new machine before leave factory will do the test based on the national standard and European standard ENISO20957.1-2013 for each machine.

Respectively do stability, static load, and fatigue testing to ensure that the structural design is in line with safety requirements ;

3. Easy installation, disassembly and post-maintenance simple structural design makes assembly and disassembly more convenient in the later period. The new version of the instruction manual can directly guide end users without professional experience and simply assemble and disassemble the machine.

4. Convenient and safe transportation: According to the requirements of the national standard, carry out safety tests such as drop-box and vibration on the sub-assembly machine to ensure that the packag design is reasonable and safe and reliable in the transportation;

5. Rich and perfect functions, more diversified MWH series product design, add 5 kinds function;

6. More compact floor area, new product design as small as possible to control the entire machine floor area, improve space utilization;

An independent sports arm provides a more balanced increase in strength, with the option of training one arm at a time or concentric and eccentric movements of the other arm at the same time.

During the exercise, the movement of the handle will converge at a point, resulting in a natural arc of movement, expanding the scope of activities.

Warm-up, stretching line and frame integration, so that concentrated exercise muscles to facilitate the stretch point.
